- vii. In micro lift irrigation schemes, air pollution occurs mainly during project construction phase. The major sources of air pollution during construction phase are:

- Pollution due to fuel combustion in various equipment.
- Emission from various construction plants.
- Fugitive emissions from material handling and transportation.

During operation phase, no major impacts are envisaged on air quality. For all major construction activities, curtaining of the site will be done to protect the surrounding areas from dust emissions. In addition, regular sprinkling of the water will be done on construction sites for dust suppression. All construction equipment/machinery will be properly maintained and tuned to minimize emissions.
